CMS, Inc. Advances Cancer Treatment for The Bahamas ***The Cancer Centre Adopts XiO[®] 3-D/IMRT Treatment-planning Platform***

St. Louis, MO (May 1, 2007) – CMS, Inc., the worldwide market leader in radiation treatment planning and workflow management solutions, is providing a new, sophisticated treatment planning system for the Cancer Centre in the Bahamas. Advancing the level of care provided by the Centre, the system will help retain native patients seeking treatment in the Bahamas as well as help attract cancer patients from neighboring areas.

XiO is a comprehensive treatment planning system that combines the latest tools and the most robust dose calculation algorithms, allowing users to generate treatment plans quickly and accurately to optimize the delivery of radiation therapy. XiO's integrated planning capabilities support a range of treatment modalities, including 3-D, MLC-based IMRT (both sliding window and step-and-shoot), solid compensator-based IMRT, brachytherapy, and proton therapy. XiO leverages the speed and performance capabilities of the Linux operating system and the processing power of dual Intel processors to deliver superior 3-D image rendering, real-time image manipulation, and rapid calculation times.

"The Cancer Centre is on the cutting edge of cancer therapy. Adding this planning system from CMS raises our standard of care to the premier level, rivaling the most advanced clinics in the world," said Dr. Conville Brown, President and Chief Executive Office of the Cancer Centre. "With this new partnership, we will be able to provide better, faster and more accurate services to our Bahamian population as well as others who will travel to the Centre for treatment."

"We are excited to partner with the Cancer Centre in the care of their patients," said Andy Cowen, President and Chief Executive Officer of CMS, Inc. "The Cancer Centre is the first and only advanced cancer treatment center in The Bahamas. Supporting their current and future requirements, we look forward to providing innovative solutions to improve their workflow management and patient care."

CMS is a worldwide leader in the development and support of radiation treatment planning and workflow management solutions. With treatment planning systems installed in more than 1,500 sites worldwide, CMS is a global resource to the radiation oncology community. A privately held corporation, CMS employs 280 professionals in its headquarters located in St. Louis, MO and regional offices in Tampa, Florida; Freiburg, Germany; Tokyo, Japan; Sydney, Australia; and Shanghai, China.
